## **Lugdunon Startup Scripts (2.2.0)**

Startup scripts for the Lugdunon MMORPG software - uses the "screen" command to manage session. This also restarts the Lugdunon process if it crashes.

Official support sites: Official Github Repo - Official Forum - Official Download Area

These start up the Lugdunon server at boot time with a "screen" process.

- i. Copy lugdunon into /home/lugowner/bin make sure it is executable
- ii. Copy run.sh into /home/lugowner/lugdunon make sure it is executable
- iii. Copy startlugdunon into /home/lugowner/lugdunon make sure it is executable
- iv. Put @reboot /home/lugowner/bin/lugdunon start into your crontab

When you want to view the Lugdunon console, just enter "screen -r" in your shell.

To disconnect from the Lugdunon console just press **CTRL-A CTRL-D**. This will leave it running and you can reconnect to it again.

I have only tested this on a Ubuntu 16.04 server...

If you want to turn off the server respawning type "touch /home/lugowner/lugdunon/nostart". To reenable it type "rm /home/lugowner/lugdunon/nostart".

Note: If you don't already have the "screen" tool installed you will need to install it by "sudo apt-get install screen".
